Project Proposal (Proposed Solution) report

The proposal report aims to develop an AI-powered fitness planning system using Gemini models. FitBuddy is intended to generate personalized fitness plans based on user requirements, helping users receive structured and adaptable workout guidance.

Project Overview

Objective The primary objective is to create an AI-based fitness plan generator that provides personalized workout recommendations according to the user's fitness requirements.

Scope The project focuses on generating customized fitness plans using AI, with user-specific inputs considered to produce suitable and structured fitness guidance.

Problem Statement

Description Generic fitness plans may not match the individual needs, goals, or requirements of every user. There is a need for a system that can generate personalized fitness plans efficiently using AI.

Impact Addressing this issue can provide users with more personalized and organized fitness guidance and make fitness planning easier and more accessible.

Proposed Solution

Approach Employing Gemini AI models to analyze user-provided fitness requirements and generate a personalized fitness plan in a structured format.

Key Features

- AI-based personalized fitness plan generation.
- User-specific workout recommendations.
- Gemini model integration for intelligent plan generation.

Key Features

- Structured and easy-to-follow fitness plans.
- Adaptable recommendations based on user inputs.
- AI-assisted generation for faster fitness planning.

Resource Requirements

Resource Type	Resource	Specification / Allocation
Hardware	Computing Resources	CPU/GPU suitable for AI application development
Hardware	Memory	As required for development and model integration
Hardware	Storage	Sufficient storage for project files, models and logs
Software	Programming	Python
Software	AI Model	Gemini models
Software	Development Environment	Jupyter Notebook / PyCharm or suitable IDE
Software	Libraries / Tools	Required Python libraries and web/API tools

Project Data / Inputs

The system uses fitness-related user inputs such as goals and requirements to generate an appropriate AI-assisted fitness plan. The exact dataset, size, and format are not specified in the provided project information.
